

Upgrade Kits

BCN3D Technologies

Upgrade your BCN3D Sigma to the current version under production and enjoy a quieter, more accurate and reliable printing experience.

Smart Fan Upgrade Kit

This Kit has been designed for all the owners of a BCN3D Sigma with a serial number which last four numbers are below XXX.YYMMDD.1146

The innovative new power management system will turn on the cooler fans only if the temperature of the is above certain threshold, reducing the operating sound when printing with just one extruder.

On the other hand, the new fans have been carefully selected in order to drastically cut down the operating sound while assuring a high dissipation airflow. As a result, the Sigma is not only much quieter than before, but also more reliable and capable to print a wide range of materials.

The Kit includes:

- 2x Cooler Fan
- 2x Extruder Board

Stepper Drivers Upgrade Kit

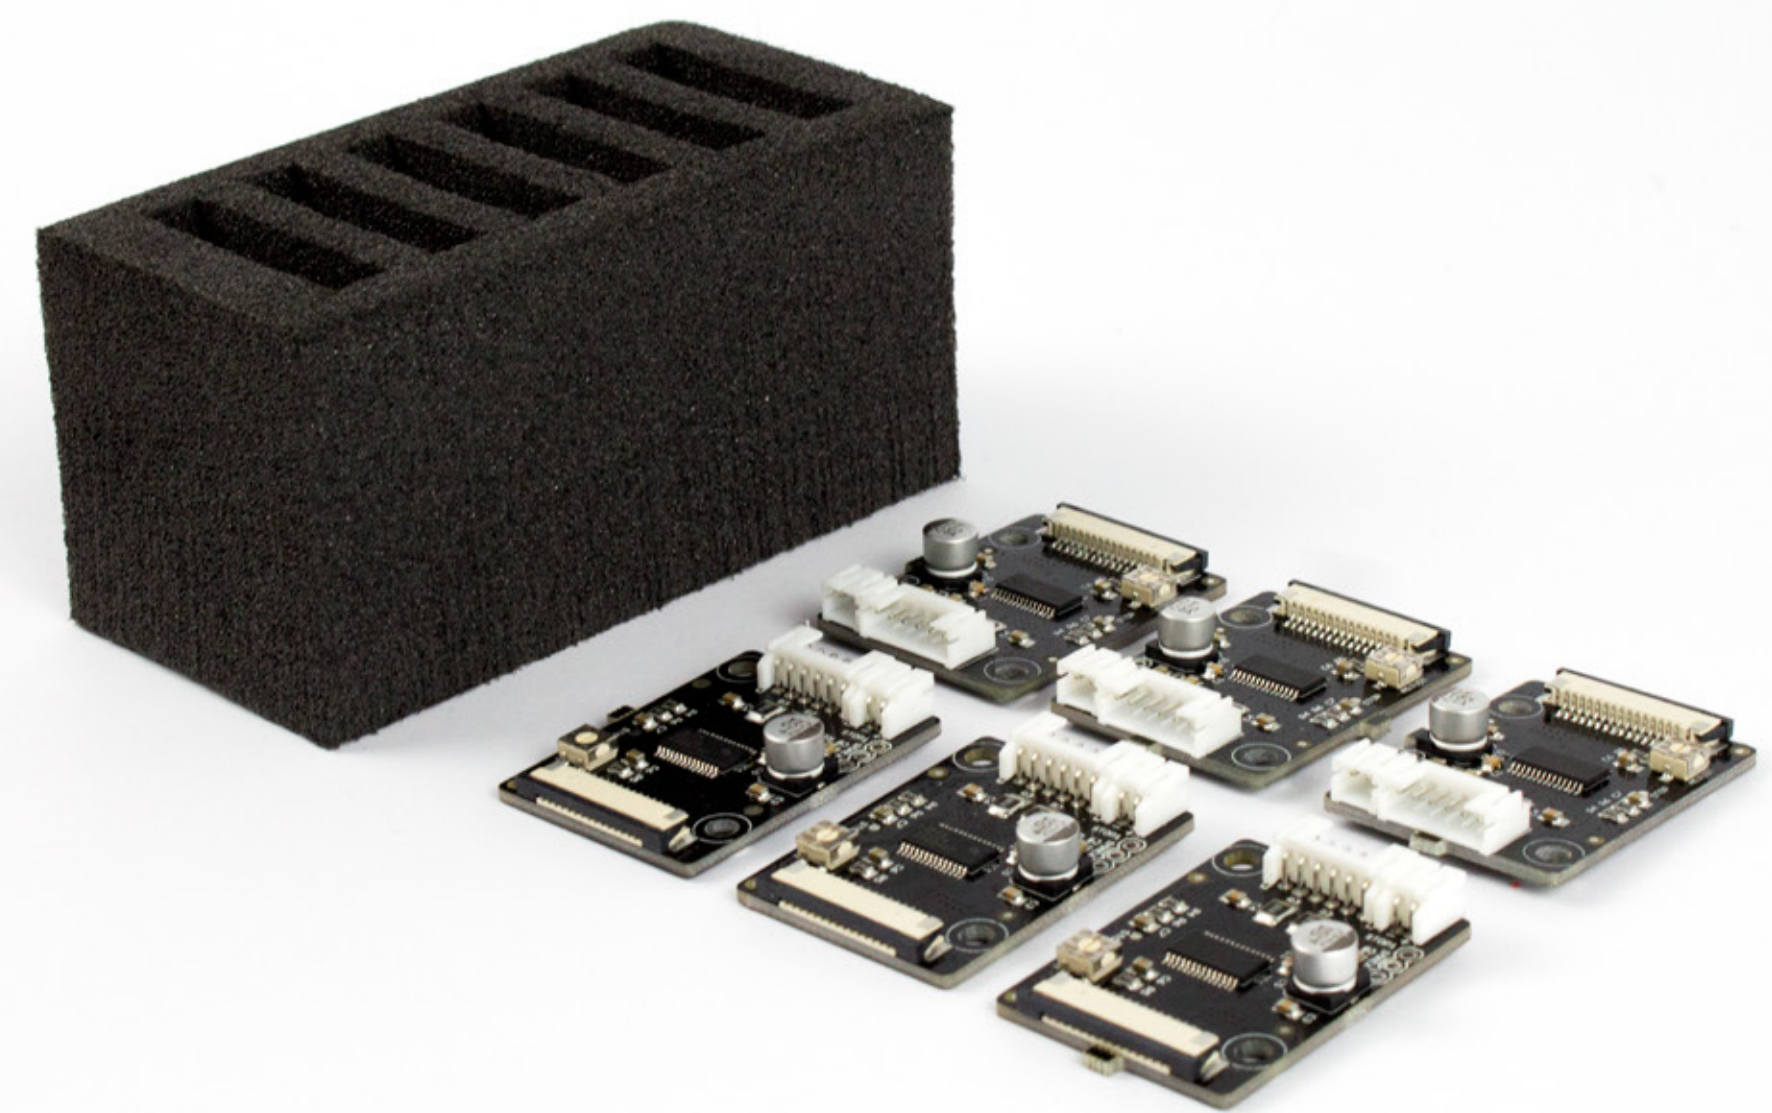

This Kit has been designed for all the owners of a BCN3D Sigma with a serial number which last four numbers are below XXX.YYMMDD.1578

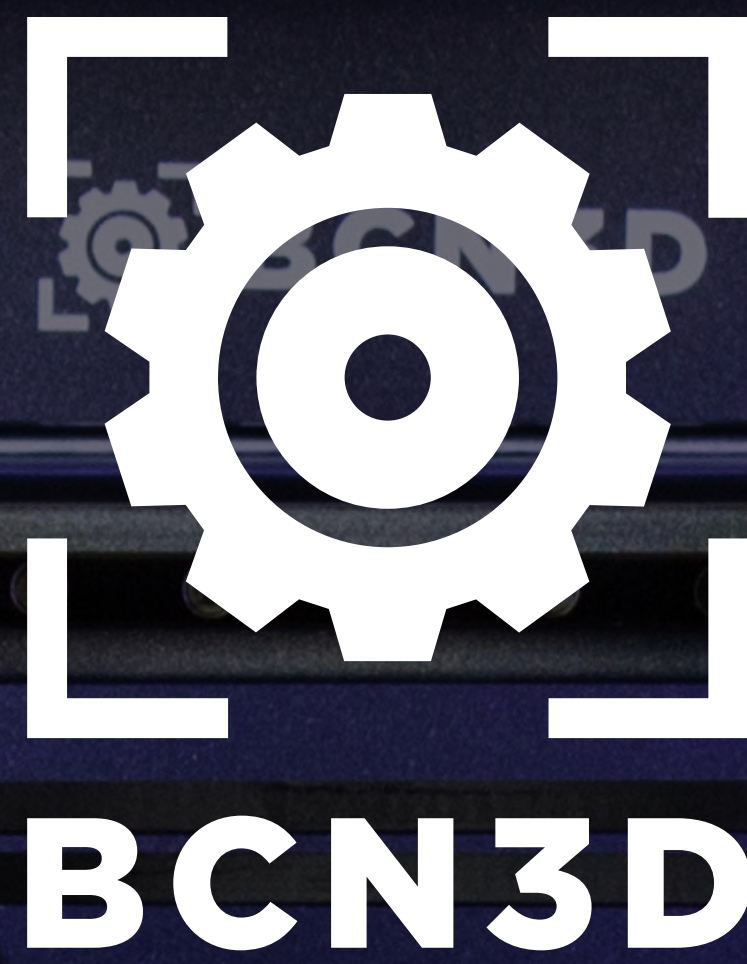

The stepper drivers have been redesigned from the ground up with the goal to improve its performance while reduce the operating sound. The new microchips manage the power in a much more efficient way, resulting not only in a drastic noise reduction, but also in an improvement of the accuracy, allowing to get much smoother surfaces.

In addition, thanks to a meticulous design and thorough validation process, the new stepper drivers dissipate heat in an optimum way, increasing its performance and cutting down the chances of suffer a lost of steps during the printing job.

The Kit includes:

- 6x Stepper Drivers
